

Carlos Recinos

Senior Full-Stack & Applied AI Engineer — Web · Mobile · LLM Systems in Production

carlosrecinos1999@gmail.com · carlosrecinos.dev · github.com/carlosrecinos · El Salvador (GMT-6 — full US business-hours overlap) · Fluent English & Spanish

Senior engineer with **9 years of experience (since 2017)** shipping web, native mobile (Android/iOS), cross-platform, and backend systems to production for companies in the US, UK, and Latin America. Founder of a bootstrapped product studio where I design, build, and operate revenue-generating SaaS end to end — including a government-integrated electronic-invoicing platform and **LLM agents serving real customers on WhatsApp**. I integrate AI coding agents (**Claude Code, multi-agent workflows**) into my daily engineering practice to multiply delivery velocity — while personally owning architecture, code review, testing, and production monitoring, so speed never outruns quality.

WORK EXPERIENCE

Founder & Lead Engineer — Chalatech (bootstrapped product studio), El Salvador 2023 – Present

- Designed, built, and operate a portfolio of production SaaS products with paying customers, acting as architect, developer, and DevOps across ~10 codebases.
- TurboPyme** — electronic-invoicing (DTE) SaaS integrated with El Salvador's Ministry of Finance tax API; issues legally binding invoices for businesses; includes an AI document reader built on open-source LLMs. **Go, ConnectRPC/Protobuf, React, PostgreSQL, GCP**
- E-Comanda** — multi-tenant restaurant POS (web + tablet) with subscription billing, in production with paying restaurants. **React, Node.js, PostgreSQL**
- EduLink** — learning platform for an English school: enrollment, student/parent dashboards, and admin panel, with **Stripe recurring subscription billing** (checkout, webhooks, lifecycle handling) and Moodle LMS integration for course groups. **TypeScript, React, Node.js, Prisma, Stripe, Docker, Turborepo**
- Eloquia + AdMind** — conversational-AI growth stack in production: multi-tenant WhatsApp LLM agents (Meta Cloud API, tool use / function calling) that qualify inbound leads and book demos on a live calendar, plus an LLM-powered Meta ads campaign generator with closed-loop click-to-WhatsApp attribution (ad → conversation → deal). **TypeScript, Next.js, Prisma, Anthropic/Gemini/Fireworks APIs**
- Delivery & ride platform** — consumer, driver, and admin apps with 2,000+ users; real-time GPS tracking and automatic order assignment via a vehicle-routing (VRP) optimizer. **Jetpack Compose, React Native, Socket.IO, Node.js, Python OR-Tools**
- Additional vertical SaaS built on shared platform infrastructure: clinic management (**RadarMédico**), billing for community water boards (**FacturAgua**, live white-label deployment), tourism-center POS, enterprise POS for a restaurant chain, real-estate CRM, and legal-practice tools.
- All products CI/CD-deployed and operated in production (GCP Cloud Run/Build, VPS + GitHub Actions, pm2, nginx) — built and maintained solo by orchestrating **Claude Code multi-agent workflows**, with human-owned architecture decisions, code review of every agent diff, and end-to-end verification before release.

Senior Android Engineer — Paid-video social media platform, USA (contract) 2024 – 2025

- Developed features for a live/paid video social platform in a US-based team, integrating a live-video SDK.

Technologies: Kotlin, Jetpack Compose, MVVM, gRPC, Hilt, unit & instrumented tests

Senior iOS Engineer — Pilgrimage-experience platform, UK (contract) 2023

- Built features and internationalization (RTL/Arabic) for an iOS app launched in the Middle East, working with a distributed team.

Technologies: Swift, SwiftUI, MVVM, i18n

Senior Full-Stack Engineer & Mobile Lead — Stock-investment platform, USA (contract) 2021 – 2022

- Led the mobile workstream of a stock-investment platform: owned the consumer app from development through App Store / Play Store delivery, alongside web features.

Technologies: React Native, Expo, React, Redux, Python, Docker

Mobile Software Engineer — Healthcare company, USA (contract) 2020 – 2021

- Built a COVID test-reader app on an international team; wrote a custom native iOS Cordova plugin for camera capture and on-device image processing with CoreML.

Technologies: Ionic, Cordova, Swift, CoreML, Sass

Software Engineer Intern — GenUI, Seattle, WA 2019 – 2020

- Developed and integrated features across iOS, Android, and React Native client projects at a Seattle software consultancy.

Technologies: Kotlin, MVVM, Koin, Google Maps/Places APIs, Robolectric, Swift, React Native, Firebase

Software Engineer — Korinver, San Salvador 2017 – 2019

- Delivered web automation solutions for local companies as part of a small consulting team.

Technologies: Node.js, Express, React, Redux

SKILLS

AI Engineering	AI-assisted development: Claude Code, agentic workflows, multi-agent orchestration, MCP · LLM APIs: Anthropic (Claude), Gemini, open-source via Fireworks · LLM integration patterns: tool use / function calling, structured output, prompt & context engineering, AI document extraction · Production LLM ops: conversation logging, closed-loop attribution, cost control
Frontend	React, TypeScript, Next.js (SSR), Redux, Vite, Tailwind
Mobile	Kotlin, Jetpack Compose, Swift, SwiftUI, React Native / Expo, Ionic, Flutter, MVVM, Clean Architecture, push notifications, GPS/maps, real-time sockets
Backend	Node.js, Go, ConnectRPC/Protobuf, REST, PostgreSQL, MongoDB, Prisma, Sequelize, Firebase, Stripe (subscriptions & webhooks)
DevOps	GCP (Cloud Run, Cloud Build), AWS (SES), Docker, CI/CD (GitHub Actions), nginx, pm2, DNS
Practices	Scrum, code review, unit/instrumented testing, Git/GitHub, Jira, technical leadership of small teams
